Foreword

Washington University School of Medicine is an internationally recognized institution where an outstanding faculty directs compassionate patient care and world-class research. Consistently ranked as one of the best medical schools in the country, Washington University offers stimulating and challenging educational opportunities.

Although many students come to Washington University for the superb clinical training the school offers, approximately 95 percent of each year's graduates of the School of Medicine report having been involved in research. During the Washington University fiscal year ending June 30, 2018, the School of Medicine received \$449.3 million from the National Institutes of Health (NIH).

The vast size and broad scope of the research activities at Washington University provide many opportunities for any medical student who has an interest in pursuing research into any aspect of modern medicine.

This brochure provides a brief description of the following research opportunities: Summer Research Opportunities, One-Year Research Opportunities, the Medical Scientist Training Program (MSTP), and Fourth-Year Research Electives. Additional information covers financial considerations, length of programs, eligibility requirements, application instructions, and contact information.

Summer Research Opportunities for Medical Students

Summer research opportunities for medical students involve participation in two to three months of full-time research in the following programs: National Heart, Lung, and Blood Institute (NHLBI)/Dean's Summer Research, Clinical Research Training Center (CRTC) Predoctoral Clinical Research Training Program TL1-Summer, Mallinckrodt Institute of Radiology, Alvin J. Siteman Cancer Center, and Summer Opportunities Abroad. Approximately 95 students participate in summer research each year.

National Heart, Lung, and Blood Institute (NHLBI)/Dean's Summer Research Program

Objectives: To provide medical students with hands-on research experience. This can be a first-time experience or a project related or unrelated to research conducted as an undergraduate. Excellent mentors from a broad range of basic and clinical sciences are available. A Washington University Summer Research Fellowship can provide a strong background for applications to the yearlong and MD/PhD (MSTP) degree programs, lead to abstracts at meetings and to publications, and enhance applications for competitive residencies.

Length of Program: Students work full-time on their research project for 2.5 months during the period from late May until classes start in August.

Funding: Fellowships provide a stipend. Support is provided through the NHLBI and Washington University School of Medicine Dean's Fellowships.

Eligibility: Applicants must be full-time medical students at Washington University School of Medicine and in good academic standing without encumbrances. All research is conducted under the direction of a full-time faculty member of the School of Medicine.

Research Interests: Students may consult a list of faculty research interests at dbbs.wustl.edu and medicine.wustl.edu/directory/academic-departments/. Students should visit prospective mentors to discuss possible projects and background reading.

Requirements: Students are required to write a one- to three-page research proposal by March, to write an abstract and present a poster at the annual Research Training Symposium and Poster Session in the fall, and to write a research report in August. Research must have appropriate human or animal committee approvals, and students are required to attend a Research Ethics Seminar and the Friday Summer Seminar Series. No academic credits may be earned from the Summer Research Program.

Stipend: Students receive \$2,068 per month.

Application: Deadline is March 15. Interested students may request an application or obtain additional information by contacting:

TL1 Summer Predoctoral Clinical Research Program

Overview: The TL1 Summer Predoctoral Clinical Research Program offered through the Clinical Research Training Center (CRTC) provides medical and allied health students with a 2-month (June and July) mentored clinical or translational research experience, didactic coursework, and career development seminars. As a core educational component of the Institute of Clinical and Translational Sciences (ICTS) at Washington University, the CRTC Predoctoral Program strives to:

- Promote clinical and translational research training for medical and allied health care predoctoral students
- Create an efficient entry into a variety of clinical research careers
- Allow flexibility to develop novel and unique clinical and translational research projects

Objectives: The TL1 Summer Predoctoral Clinical Research Program is an introductory program that supports a select group of trainees and exposes them to excellent patient-oriented researchers. In addition, the program will instruct students to:

- Design and conduct clinical research
- Analyze data

- Consider relevant ethical and legal issues
- Give oral presentations
- Develop and present scientific posters

Eligibility and Requirements: Doctoral-degree students in medicine, physical therapy, occupational therapy, biomedical engineering, pharmacy, audiology and communications sciences, and other allied health professions who wish to learn more about academic careers in clinical and translational research are eligible. No prior clinical or translational research is required. Trainees accepted into the program must be able to commit full-time effort to the program for the two-month duration of the appointment (June and July), successfully complete all coursework, attend the Research Ethics Seminar and the Friday Summer Seminar Series, and participate in the annual Research Training Symposium and Poster Session in October following the trainees' appointment.

TL1 Summer Predoctoral Clinical Research Program Required Courses:

- Analysis of Clinical Data (M17-5881, Summer, 1 credit)
- Designing Outcomes and Clinical Research Workshop (M17-504, Summer, 1 credit)

Stipend: Students receive the equivalent to the current NIH predoctoral stipend level (\$2,068 per month).

Application: Applications for the TL1 Summer Predoctoral Clinical Research Program accepted online at crtc.wustl.edu. Applications open in late fall of each year and close in early spring of the following year. Prospective trainees are responsible for completing all required steps of the application, admission, and enrollment process.

More Information: For more information, including specific application and coursework requirements, please visit the program website at crtc.wustl.edu or contact:

Jay Piccirillo, MD, FACS
 CRTC Predoctoral Program Director

Mallinckrodt Institute of Radiology Summer Research Program (MIRSRP)

Overview: For many years, the Mallinckrodt Institute of Radiology Summer Research Program (MIRSRP) has offered undergraduate and medical students an excellent introduction to current radiological sciences research. The wide variety of ongoing research programs includes:

- Breast imaging
- Cardiovascular imaging
- Contrast agent development
- Diagnostic radiology
- Digital imaging
- Magnetic resonance imaging
- Magnetic resonance spectroscopy
- Molecular pharmacology
- Neuroscience imaging
- Nuclear medicine
- Optical imaging
- Positron emission tomography
- Radiopharmaceutical development
- Ultrasound
- X-ray computed tomography

The start and finish dates of the program are flexible. To view the requirements or to download an application, visit mir.wustl.edu and choose Education/ Training Programs/Summer Research Program. The direct URL is mir.wustl.edu/research/summer-research-program. Information on research may be found at mir.wustl.edu/research/research-laboratories, including descriptions of the various MIR research labs and individual faculty members' research interests.

Stipend: Applicants selected to the MIR Summer Research Program will receive \$5,000 for a 10-week summer research period.

Application: Late January prior to the summer research period. Official deadline can be checked online.

Application forms may be found online (available in November)

Vijay Sharma, PhD
Professor of Radiology, of Neurology, and of Biomedical Engineering

The Leah Menshouse Springer Summer Opportunities Program at Siteman Cancer Center at Barnes-Jewish Hospital and Washington University School of Medicine

Overview: The Alvin J. Siteman Cancer Center at Barnes-Jewish Hospital and Washington University School of Medicine provides opportunities for undergraduate, graduate, and medical students currently enrolled at Washington University or other accredited universities to apply to work on cancer-focused research projects during the summer. Opportunities range from basic laboratory research to clinical research to prevention/control and population research. Past research project titles include:

- Development of a Novel Image-Guided Platform for Treatment of Glioblastoma Multiforme
- Triple-Negative Breast Cancer: A Mechanistic Investigation of the DNA Damage Response
- Correlations of Distress and Socioeconomic Status among Women with a Gynecologic Cancer
- Analyzing the Differential Effects of NF1 Germline Mutations
- Empowerment and Education for Fertility Self-Management in Female Pediatric Cancer Survivors and Their Parents
- Elucidating the Role of NADPH Oxidase in Altered Redox States of Lung Cancer

Stipend and Program Dates: Applicants selected for the program will receive a stipend for a 10-week summer research period from May through August, though some flexibility is available.

Application: Requirements and the application will be available in November via the Summer Opportunities Program webpage on the Siteman Cancer Center website. For further information, please contact SCCSummerOpportunities@wudosis.wustl.edu.

Summer Opportunities Abroad Program (SOAP) — WUSM Global Health & Medicine

Overview: The aim of SOAP is to provide first-year medical students with a practical, engaging global health experience. All aspects of international health are possible focuses of a student's experience, including but not limited to clinical exposure; public health research and implementation; infectious diseases; basic, clinical, or translational research in any topic; volunteer service; cultural or anthropological studies; or health-care system comparisons.

Students will arrange their projects with their on-site and WUSM mentors prior to applying. In order to find a project, students may review previous SOAP projects documented on GH&M's website, coordinate with their own mentor or outside program, or speak with Gary Weil, MD, or Cynthia Wichelman, MD, faculty advisors to GH&M, for guidance.

Two faculty who typically accept first-year students each year are Lora Iannotti, PhD, who oversees maternal and child health research in Ecuador, and Project Peanut Butter founder Mark Manary, MD, who oversees malnutrition research in Sierra Leone. Students interested in these potential projects should contact Drs. Iannotti or Manary prior to applying for SOAP.

Stipend: Approximately \$3,500 each for about eight students total. If the SOAP project proposal involves research, students may be additionally awarded with Summer Research Program funding through the Office of Medical Student Research.

Eligibility: First-year medical students planning on completing the project during the summer before second year. Summer fellowships must be a minimum of eight weeks and must not be in locations that are under a federal travel warning.

Application: Applications are due in early February in order to allow students to consider an alternative summer experience if they are not a recipient. For more information, please contact:

Gary Weil, MD
WUSM Global Health & Medicine Advisor
Email: gary.j.weil@wustl.edu

Summer Research Opportunities for Undergraduate Students

Summer Research Opportunities for undergraduate students involve participation in two to three months of full-time research in the following programs: Biomedical Research Apprenticeship Program (BioMedRAP), Amgen Scholars Program, BP-ENDURE St. Louis Neuroscience Pipeline Program, Opportunities in Genomics Research, Summer Research Program at the Mallinckrodt Institute of Radiology, and Summer Student Opportunities at the Siteman Cancer Center.

Biomedical Research Apprenticeship Program at Washington University in St. Louis

Overview: The Biomedical Research Apprenticeship Program (BioMedRAP) is a 10-week summer research internship for exceptional students interested in pursuing biomedical research careers. The program is designed to provide a rigorous, in-depth research experience to prepare participants for top-quality PhD and MD/PhD programs in the biomedical sciences. As a BioMedRAP participant, you will:

- Conduct independent research with outstanding faculty mentors
- Work in a cutting-edge science and technology environment
- Gain exposure to some of the nation's finest biomedical investigators and an extensive variety of research topics
- Have the opportunity to receive individualized career counseling and develop your career interests
- Participate in workshops, seminars, and journal clubs
- Build a social network with student peers and faculty
- Prepare to apply to the best PhD and MD/PhD programs in the U.S.

Eligibility: BioMedRAP selects participants based on academic achievement, leadership, and commitment to diversity. We seek applicants who have challenged themselves and excelled academically; demonstrate experience overcoming substantial educational, cultural, or economic obstacles; are first-generation college students; or can demonstrate a strong interest in bringing diverse people together. We encourage applications from individuals who come from rural or inner-city areas and individuals from groups traditionally underrepresented in biomedical research — specifically African-Americans, Hispanic Americans, Native Americans, Pacific Islanders, women, and students with disabilities. Applications are also encouraged from international students

currently pursuing a bachelor's degree in the U.S. Individuals who have earned a baccalaureate degree and students who are not currently enrolled at a U.S. institution are not eligible to apply.

Benefits of Participation: BioMedRAP participants receive a generous research stipend for 10 weeks of residence in the program. Additionally, on-campus housing and travel to and from St. Louis are covered at no cost to the participants.

Application: The online application is available every year beginning November 1. Early application is recommended. Completed applications must be received no later than February 1.

A Diverse Community of Scholars: Washington University is committed to fostering diversity in the biomedical research community — both at our institution and beyond. By bringing together people of different backgrounds, perspectives, and talents, programs such as BioMedRAP enrich the learning experience, intellectual exchange, and pursuit of scientific discovery for all members of the academic community.

For more information, please contact:

BioMedRAP Admissions

The Amgen Scholars Program at Washington University in St. Louis

Overview: The Amgen Scholars Program at Washington University in St. Louis is a 10-week intensive summer laboratory experience in bioscience research for undergraduate students. Scholars work with a mentoring team made up of world-renowned faculty, staff, graduate students, and postdoctoral fellows. Scholars take lead on an intriguing research project in a faculty member's laboratory and work directly with an in-lab mentor, a postdoctoral scholar, and/or a graduate student. This creates an environment for scholars to become fully immersed in the research culture of the biosciences and the process of scientific discovery. The Amgen Scholars Program is administered by the Division of Biology & Biomedical Sciences (DBBS), which also oversees PhD education and training in the biological sciences.

In complement to the research experience, Amgen Scholars participate in lab meetings, journal clubs, scientific and professional development seminars and workshops, individual advisement, and community building activities. The program prepares scholars for applying to top-tier graduate and professional schools and fosters an understanding of the excitement and trajectory of a

career in research. The program's offerings include: scientific seminars and workshops, specialized journal clubs on topics in the biosciences, preparation materials for the GRE or MCAT, career and graduate pathway exploration, social outings, and coursework covering the science and business of biotechnology as well as interdisciplinary competencies for bioscience trainees. Scholars will also have the opportunity to attend various elective social outings that allow for exploration and engagement with the greater St. Louis area and community. The program concludes with a poster competition where scholars present on their summer projects. The Amgen Scholars Program at Washington University in Saint Louis is committed to empowering and developing the next generation of leaders in the biosciences.

Eligibility: Applicants must be a U.S. citizen or permanent resident undergraduate student enrolled in a four-year college or university in the U.S., Puerto Rico, or other U.S. territory. We will focus on the applicant's demonstrated aptitude in math and science, letters of recommendation, and interest in PhD or MD/PhD training in preparation for a career in biomedical research. Applicants must be a sophomore with four quarters or three semesters of college experience, a junior, or a non-graduating senior who is returning in the fall to continue their undergraduate studies. Students from backgrounds historically underrepresented in the sciences are strongly encouraged to apply. We also encourage students from economically disadvantaged backgrounds and those who attend liberal arts or lower research-output institutions to apply.

Benefits of Participation: Amgen Scholars participants receive a generous research stipend for 10 weeks of residence in the program. Additionally, on-campus housing and travel to and from St. Louis are covered at no cost to the participants along with an all-expenses paid trip to participate in the annual National Amgen Scholars Symposium. A free public transportation pass for travel within the St. Louis metropolitan area also is provided.

Application: The online application is available every year beginning November 1. Early application is recommended. Completed applications must be received no later than February 1.

For more information, please contact:

Amgen Admissions
Direct: (314) 362-7456
Toll free: (800) 852-9074
Email: dbbs-summerresearch@wusm.wustl.edu
Website: dbbssummerresearch.wustl.edu

BP-ENDURE St. Louis Neuroscience Pipeline Program at Washington University

Overview: The Neuroscience Pipeline program prepares undergraduates from diverse backgrounds for neuroscience PhD programs. With support from the NIH BP-ENDURE Program and Washington University, accepted students are funded for up to two 10-week summers. The program combines research experience and a rigorous summer curriculum that focus on building a foundation in neuroscience, scientific communication and admission to graduate school. During the academic year, trainees take a series of online workshops and attend and present at the Society for Neuroscience meeting to sustain and strengthen skills after the summer. Combined with personalized advising and an empowering community, the Pipeline offers outstanding, holistic training budding neuroscientists will use for years to come.

Eligibility: Students are strong candidates for the Pipeline if they are: interested in research and pursuing a PhD or MD/PhD in a neuroscience-related field, enrolled full-time as an undergraduate, a US citizen or permanent resident, and are from an underrepresented group (e.g. racial and ethnic minorities, students with disabilities, individuals from low income households and first-generation college students). All years of undergraduates may apply, and previous research experience is not required.

Benefits of Participation: Benefits include a \$5,000 stipend per summer, free travel to and from the program, university housing, and a public transportation pass for travel throughout St. Louis. The Pipeline program will fund a second summer at Washington University or another research-intensive school. Participants also have access to GRE/MCAT prep courses and funds to attend up to two scientific conferences annually. WUSTL ENDURE scholars have ample opportunities to network with all levels of neuroscientists and become part of scholarly and learning communities encouraging of their success.

Application: The online application opens each November and is accessible via our website endure.wustl.edu. Completed applications must be received by February 1.

For more information, please contact:

Erik Herzog, PhD
Director, BP-ENDURE: St. Louis Neuroscience Pipeline

Diana José-Edwards, PhD
Program Coordinator, BP-ENDURE: St. Louis Neuroscience Pipeline

Voice: (314) 935-5137
Email: endure@wustl.edu
Website: endure.wustl.edu

Opportunities in Genomics Research (OGR) — Undergraduate: Scholars Program at The Elizabeth H. and James S. McDonnell III Genome Institute

Overview: The Opportunities in Genomics Research (OGR) program sponsored by McDonnell Genome Institute is designed to prepare bright, innovative, and talented students for careers in genomics and related fields. This 10-week summer program provides students with an intensive, mentored research experience. Students will be part of an excellent lab team led by one of the established scientists at Washington University School of Medicine. At the end of the program, all participants will give an oral presentation of their summer research findings. The program includes enrichment activities such as a Kaplan GRE course, journal club, career counseling/workshops, and presentation/writing skills workshops.

Provisions of the Program: Competitive stipend, on-campus housing, and travel to/from program

Requirements: Must be a sophomore, junior, or senior at a four-year institution at the time of entry into the program

GPA Requirements: Competitive or highly competitive GPA

Residency: Must be a U.S. citizen or a permanent resident

Major: Science, technology, engineering, or mathematics fields (some exceptions)

All OGR programs are funded by the NHGRI-Diversity Action Plan, which seeks to increase the number of underrepresented students in genomics. These groups include: African-Americans, Native Americans (including Alaska Natives), Native Pacific Islanders, and Hispanics, Latinos, and Chicanos. It also includes students from socioeconomically or culturally disadvantaged backgrounds and students with learning and/or physical disabilities

For more information: Visit genome.wustl.edu/outreach

Summer Research Program at the Mallinckrodt Institute of Radiology

See Summer Research Opportunities for Medical Students, page 7.

The Leah Menhouse Springer Summer Opportunities Program at Siteman Cancer Center

See Summer Research Opportunities for Medical Students, page 8.

Clinical Research Training Center Advanced Summer Program for Investigation and Research Education (ASPIRE)

Overview: The Clinical Research Training Center Advanced Summer Program for Investigation and Research Education (ASPIRE) provides undergraduate students with an eight-week (June and July) mentored research opportunity at Washington University School of Medicine. The program is designed to immerse young investigators in clinical and translational research and also includes didactic sessions and seminars for three hours of undergraduate academic credit.

M17-404 Fundamentals of Clinical and Translational Research

- Mentored Independent Clinical Research Experience – 1 Credit
- Analysis of Clinical Data – 1 Credit
- Designing Outcomes and Clinical Research Workshop – 1 Credit

Eligibility and Requirements: Current full-time college freshmen, sophomores and juniors who wish to learn more about clinical research are eligible. Applicants must be at least 18 years of age by June. No prior clinical research experience is required. Scholars accepted into ASPIRE must be able to commit full-time effort (40 hours per week) to the program for the two-month duration of the appointment, successfully complete all course work, attend the Research Ethics Seminar, the “How to Present” lecture, the Friday Summer Seminar Series, as well as design and deliver a final presentation of their research work at the end of the program.

Benefits of Participation: Through ASPIRE, scholars earn three hours of undergraduate college credit, conduct mentor-supported research, obtain textbooks for training sessions, develop tools to promote an understanding of medical research, and experience networking opportunities for career building.

Tuition and Scholarships: Tuition is \$2,400. Scholarships are available.

Application: Applications to the Advanced Summer Program for Investigation and Research Education are accepted online at crtc.wustl.edu/aspire. Applications open on November 1 and close on February 20. Early application is recommended. Incomplete applications will not be considered. Prospective scholars are responsible for completing all required steps of the application, admission and enrollment processes.

More Information: For more information, including specific application requirements and instructions for submitting a scholarship request, please visit the program website at <https://crtc.wustl.edu/programs/undergraduate/aspire/> or contact crtc@email.wustl.edu.

One-Year Research Degree Opportunities for Medical Students

One-year research degree opportunities for medical students involve participation in one year of full-time research in the following programs: Master of Science in Clinical Investigation (MSCI), Master of Population Health Sciences (MPHS), Master of Public Health (MPH), and One-Year Research Without Degree (MD5).

Master of Science in Clinical Investigation Degree Program

Overview: The Master of Science in Clinical Investigation (MSCI) Program provides high-quality, multidisciplinary training in clinical research to promote the successful career development of clinical investigators. The MSCI is available to postdoctoral scholars, junior faculty, and predoctoral students enrolled in an established clinical research training program. Postdoctoral scholars and junior faculty must be within the medicine and allied health professions, conducting clinical research at Washington University or with an affiliated program. Predoctoral students in medicine, psychology, biology and biomedical sciences, social work, audiology, physical therapy, occupational therapy, and related disciplines in the Graduate School of Arts & Sciences who have completed or are enrolled in the intensive Predoctoral Interdisciplinary Clinical Research Training (PICRT) Program are also eligible.

Requirements: The master's program consists of 33 credits and includes the following core curriculum in clinical investigation:

- Designing Outcomes and Clinical Research or Epidemiology for Clinical Research
- Ethical and Legal Issues in Clinical Research
- Introduction to Statistics for Clinical Investigation
- Intermediate Statistics for the Health Sciences
- Advanced Methods for Clinical and Outcomes Research

Scholars also:

- Conduct independent clinical research under the tutelage of a mentorship committee
- Participate in an ongoing research seminar series to present and discuss research as a work-in-progress
- Take elective coursework related to their research interests
- Submit a final thesis consisting of a clinical research manuscript submitted to a peer-reviewed journal for publication, or completion of biomedical entrepreneurship-related project

Advanced placement credit can be earned for past equivalent coursework as determined on an individual basis up to nine credit hours.

Tuition: Tuition for the 2019-20 academic year is \$1,345 per credit hour. Courses are open to all paying students. Trainees currently enrolled in other medicine and allied health programs should contact the program director or program coordinator to discuss entry into the MSCI program.

Location: Most courses and seminars are taught during late afternoon or early evening hours on the medical school campus.

Further Information: Visit crtc.wustl.edu or contact Sara O’Neal, Program Coordinator, saraoneal@wustl.edu.

Master of Population Health Sciences Degree Program

Overview: The Master of Population Health Sciences (MPHS) offered by the School of Medicine is a 10-month, full-time degree program for medical students, residents, fellows and attendings seeking training in clinical research methods. The curriculum emphasizes the role of clinical epidemiology and biostatistics in approaching clinical effectiveness and outcomes research for all medical fields.

The MPHS does not require a research thesis upon completion of the program. Instead, the program uses applied coursework to focus on the long-term mastery of skills. Using topics relevant to their careers and interests or research being done while in the program, MPHS students practice the art of developing research study protocols, performing systematic reviews, designing epidemiologic studies, writing grants, and much more. Many students go on to produce award-winning research using their applied coursework and skills learned in the program. Students looking for research project ideas can work with the MPHS Medical Student Mentor to find opportunities within Washington University.

MPHS students deepen their learning by choosing one of three concentrations: Clinical Epidemiology, Health Services, or Psychiatric and Behavioral Health Sciences.

Prospective Students: Applicants should be in the process of completing a degree in a clinical training program at the doctoral level or should have completed such a degree. The pace of coursework assumes students have familiarity with clinical medicine.

Program Format: For medical students, the MPHS program is a full-time, 10-month format. The maximum course load is 18 credit hours per semester.

Core MPHS Courses:

- Introduction to SAS for Clinical Research
- Introductory Biostatistics for Clinical Research
- Intermediate Biostatistics for Clinical Research
- Ethics in Population and Clinical Health Research
- Introductory Clinical Epidemiology
- Intermediate Clinical Epidemiology

Information on elective courses is available at mphs.wustl.edu.

MPHS Program: The MPHS provides medical students with an opportunity to supplement their clinical training and coursework with a quantitative approach to population health research. Students develop core skills in epidemiology and biostatistics, which can be applied to research in any clinical field, from primary to specialty care. The program is intended for medical students who plan to incorporate clinical effectiveness or outcomes research into their clinical careers. The program is not restricted to Washington University medical students; students from other medical schools are encouraged to apply. Most medical students obtain their MPHS degree after the second or third year of medical school.

Application: March

Notification of Students of Admission Decision: April

Commitment Deadline: May

Further Information: The director of the MPHS program is Graham Colditz, MD, DrPH. Additional information can be obtained at mphs.wustl.edu or by contacting the MPHS program coordinator, Blanka Hodzic, at bhodzic@wustl.edu or (314) 286-0881.

Master of Public Health (MPH) Degree Program

Overview: The purpose of the joint MD/MPH degree program is to train physicians in the knowledge and skills needed to recognize, analyze, and address health problems affecting communities and society. Available exclusively to current Washington University School of Medicine students pursuing their Doctor of Medicine degree, students in this program earn a Master of Public Health degree from the Brown School in one additional year of study. Accredited by the Council on Education for Public Health since 2012, the Master of Public Health program is recognized as a pioneer in transdisciplinary

problem-solving and public health research. This national “seal of approval” publicly recognizes the quality of the public health program, faculty, staff, and students. Students gain an understanding of the social, economic, environmental and cultural determinants of health and learn to apply evidence-based approaches to community-level disease prevention, health promotion, and health policy.

Students have access to the latest research, plus opportunities to work with faculty to explore their research interests through special projects, independent study, research assistant positions, or research-oriented fieldwork. The MPH faculty are on the forefront of chronic disease prevention, tobacco policy research, mental health, health systems science, health communications, epidemiology, violence and injury prevention, and system dynamics. The MPH is affiliated with 13 research centers and has faculty connections with numerous Washington University research centers. These centers produce groundbreaking research on health disparities, health policy, health systems, and the prevention and treatment of chronic disease.

Curriculum: 52 Credits are required for the MPH degree, with a 3-credit- hour practicum at an approved site. Specializations are available in Epidemiology, Biostatistics, Global Health, Health Policy Analysis, and Urban Design. Core courses include:

- Health Behavior and Promotion
- Biostatistics
- Epidemiology
- Environmental Health
- Health Administration and Policy
- Transdisciplinary Problem Solving

Eligibility: Washington University medical student. Current MD students in good standing may apply for entry into the MPH program in fall of their third year of the MD program.

Funding: The tuition rate for new full-time MPH students for the 2019-2020 academic year is \$18,920 per semester. The Brown School offers generous merit-based scholarships — more than \$6 million last year — as well as need-based financial aid.

Application: Current MD students will apply for entry into the MPH program in fall of their third year through the centralized Schools of Public Health Application Service (SOPHAS) at <https://sophasexpress.liaisoncas.com>. Applications are available September 1; deadline for admission and scholarship consideration is December 15. Applicants will be notified of

admission decisions by February 1; admitted students must accept/confirm intent to enroll by April 1. Please visit <https://mph.wustl.edu/apply> for more information.

Further Information: The directors of the MPH program are Will Ross, MD, MPH, at the School of Medicine (rossw@wustl.edu) and Lora Ionnatti, PhD, at the Brown School of Social Work (lionnatti@wustl.edu).

One-Year Research Without Degree Program (MD5)

Number of Participants: Available to all Washington University medical students at any point in the curriculum.

Length of Program: Completed in one year; in exceptional circumstances, a second year may be permitted.

Funding: None through Washington University School of Medicine, though students may receive a stipend from their research mentor. If a stipend is available, the primary university appointment must be as a full-time student. A secondary appointment as a predoctoral fellow, predoctoral trainee, or graduate research assistant is acceptable. These appointments may imply stipend limits. Students are not eligible for employee benefits, but the department may elect to cover student health costs under separate payment. Tax liability and withholding will depend on the appointment and the individual's circumstances.

Project Guidelines and Eligibility: Students who wish to take advantage of this program should select a research mentor and obtain permission to work with him/her for one year. The arrangement should then be approved by the mentor and by the Associate Dean for Medical Student Research through the application process.

Because this is a recognized program endorsed by the school, students are registered for the year for this course of study with a Pass/Fail grade option and are considered full-time students during that time. No tuition is charged. A nominal registration fee is charged, and the student health fee is charged.

Requirements:

- An independent research project must be completed.
- The application process requires a completed application form and a research proposal due one month prior to the start of the research year.
- Students and mentors are expected to meet regularly throughout the year to ensure timely progress and benefit of mentor guidance and feedback.

- No thesis is required. However, a final research report must be submitted to the mentor and the Associate Dean for Medical Student Research at the completion of the research year.
- The mentor issues to the Associate Dean for Medical Student Research a final grade of Pass or Fail and an evaluation of the student's performance at the completion of the research year. This grade will be recorded on the student's permanent academic record.

Application: Due one month prior to the start of the research year. The application and the research proposal are submitted to the Associate Dean for Medical Student Research. Students interested in the program may obtain additional information and an application by contacting:

Master of Science in Applied Health Behavior Research Program

Overview: The Master of Science (MS) in Applied Health Behavior Research (AHBR) provides multidisciplinary training in applied research to gain a wider perspective of how health behaviors impact medical care and clinical outcomes through coursework, exemplary instructors, and classmates with different backgrounds, experiences, and perspectives. Applied Health Behavior Research is a transdisciplinary science that seeks to implement and evaluate effective interventions into standard practice in clinical and community settings to improve health outcomes. The degree program focuses on developing the skills required for the design, management, and evaluation of health behavior programs and research studies involving human participants. Two MS program options are available: The One-Year Research Intensive Master of Science in Applied Health Behavior Research and The Part-Time Master of Science in

Applied Health Behavior Research. The part-time program offers two concentration options: Health Behavior Research (HBR) and Health Education, Program Planning & Evaluation (HEPPE). A 15 credit hour Graduate Certificate in Health Behavior Planning and Evaluation is also available.

Eligibility: The one-year option combines three semesters of coursework with nine credit hours of mentored research. It is designed for individuals planning careers in a variety of medical and health-related fields. It is an especially good fit for students interested in gaining clinical research experience during a “gap year” prior to applying to doctoral programs or medical school. A part-time option is also offered and is ideal for current Washington University employees and other professionals engaged in research in academic, clinical and community settings, who seek a practical opportunity to cultivate new skills for career engagement and advancement.

Degree Requirements: The Master of Science program consists of 33 credits and includes the following core and concentration courses, in addition to a variety of electives:

- Project Management in Clinical & Community Settings (core)
- Health Behavior Theory (core)
- Introduction to Biostatistics (core)
- Survey Methods: Design and Evaluation (core)
- Foundations of Health Care Research (one-year program and HBR concentration)
- Mentored Research (one-year program)
- Health Education: Methods, Planning & Evaluation (HEPPE concentration)
- Evaluation of Health Services Programs (HEPPE concentration)

Tuition: Tuition for the 2019-20 academic year is \$1,345 per credit hour. Washington University employees may be eligible for a 50 percent Tuition Assistance Benefit after one year of fulltime employment. The AHBR program offers additional tuition assistance to degree-seeking students.

Location: Most courses and seminars are taught during late afternoon or early evening hours on the medical school campus.

Application: Admission is on a rolling basis. Scholars may begin in Fall, Spring or Summer semesters. To start an application, complete the application form at https://wucrctc.az1.qualtrics.com/jfe/form/SV_9TVsvUUTmsQKDGZ.

Further Information: Visit <https://crtc.wustl.edu/programs/degrees/ahbr/> or contact Laura Peer, Project Manager, at ahbr@email.wustl.edu or (314) 454-8956.

One-Year Research Funding Opportunities for Medical Students

For the MSCI degree program for medical students, stipends are available through the following fellowship: Clinical Research Training Center Predoctoral Program.

Application Deadline: February

TL1 One-Year (Intensive) Predoctoral Clinical Research Program

Overview: The One-Year (Intensive) Predoctoral Clinical Research Program offered through the Clinical Research Training Center (CRTC) provides medical and allied health students with a one-year mentored clinical or translational research experience, didactic coursework, and career development seminars. As a core educational component of the Institute of Clinical and Translational Sciences (ICTS) at Washington University, the CRTC Predoctoral Program strives to:

- Promote clinical and translational research training for medical and allied health care predoctoral students
- Create an efficient entry into a variety of clinical research careers
- Allow flexibility to develop novel and unique clinical and translational research projects

This is a one-year, pull-out program.

Objectives: The One-Year (Intensive) Predoctoral Clinical Research Program supports a select group of trainees as they embark on careers as patient-oriented researchers by teaching them to:

- Analyze data
- Compete for research funding
- Consider relevant ethical and legal issues
- Develop and present scientific posters
- Design and conduct clinical research
- Write manuscripts and grants

Eligibility and Requirements: Doctoral-degree students in medicine, physical therapy, occupational therapy, biomedical engineering, pharmacy, audiology and communications sciences, and other allied health professions who wish to pursue academic careers in clinical and translational research are eligible. Trainees accepted into the program must be able to commit full-time effort to the program for the duration of the appointment (minimal duration is nine months), successfully complete all coursework per the requirements of the individual courses, participate in the annual Research Training Symposium and Poster Session in October immediately following the trainees' appointment, and attend seminars. Trainees also have the opportunity, but are not required, to pursue a Master of Science in Clinical Investigation Degree.

**TL1 One-Year (Intensive) Predoctoral Clinical Research Program
Required Courses:**

- Analysis of Clinical Data (M17-5881, Summer, 1 credit)
- Designing Outcomes and Clinical Research Workshop (M17-504, Summer, 1 credit)
- Designing Outcomes and Clinical Research (M17-513, Fall, 3 credits) OR Epidemiology for Clinical Research (M17-588, Spring, 3 credits)
- Introduction to Statistics (M17-522, Fall, 3 credits)
- Scientific Writing and Publishing (M17-529, Spring, 2 credits)
- Ethical and Legal Issues in Clinical Research (M17-510, Fall, 2 credits)
- Pre/Postdoctoral Interdisciplinary Research Training in Translation (PIRTT) Seminar, 2 Semesters (M17-515, Fall and Spring, 2 credits per semester)

Stipend: Students receive the equivalent to the current NIH predoctoral stipend level (\$2,068 per month); students' health-care costs through Washington University are covered.

Tuition: Full tuition funding is provided for courses required by the TL1 Program. Students may be responsible for any tuition needed for additional coursework to fulfill the requirements of a master's degree program

Application: Applications for the TL1 One-Year (Intensive) Predoctoral Clinical Research Program accepted online at crtc.wustl.edu. Applications open in late fall of each year and close in the early spring of the following year. Prospective trainees are responsible for completing all required steps of the application, admission, and enrollment process.

More Information: For more information, including specific application and coursework requirements, please visit the program's website at crtc.wustl.edu or contact:

Jay Piccirillo, MD, FACS

One-Year Mentored Research Training Opportunity for Medical Students

The Department of Otolaryngology-Head and Neck Surgery has a T32 Mentored Training Program for Medical Students that offers 9- to 12-month mentored research experiences, with opportunities to participate in research on many levels. Students will learn from successful program faculty conducting cutting-edge clinically relevant basic, clinical, and translational research in the auditory, vestibular, olfactory, and communication sciences. In addition, tuition is available for students who wish to take courses in clinical investigation and obtain a master's degree.

Benefits:

- Monthly stipend, research-related expenses, and health insurance
- Tuition funding for required courses - including Certificate of Clinical Investigation (CCCI) and Master of Clinical Science in Clinical Investigation (MSCI) certificate or degree
- Travel to national meetings
- Multidisciplinary seminars

Applicant Eligibility:

- Must be US citizen, US non-citizen national, or US permanent resident and enrolled in a doctoral degree program in medicine in the US
- Commit to a “year-out” opportunity (e.g., 9- to 12-month full-time research training experience)
- Support of a program-approved mentor

Application Packet: Applications open in November each year and close in March of the following year.

Learn more: <http://oto.wustl.edu/Education/Medical-Student/T32-Predoctoral-Training-Program>

More information: Visit <http://oto.wustl.edu/Education/Medical-Student> or contact Jana Richardson, Program Administrator, at richardsonj@wustl.edu, or Jay F. Piccirillo, MD, Program Director, at piccirij@wustl.edu.

Medical Scientist Training Program (MSTP)

Objectives: To prepare individuals for careers in academic medicine and biotechnology. Students complete Doctor of Medicine and Doctor of Philosophy degrees with research in a medically relevant field.

Number of Participants: 25 first-year students annually. Approximately 190 students at all levels of the program.

Length of Program: Students complete the preclinical phase of the MD curriculum, a minimum of three years of original research toward a thesis, and return to the MD curriculum to complete the clinical requirement. The program may be completed in as little as six years, though seven or eight years is the norm.

Funding: Tuition and student health fees are paid, in addition to a stipend of \$30,500 per year. Funding is provided by the NIH, the Olin Foundation, the School of Medicine, and the Graduate School. International students receive the same level of financial support as U.S. citizens.

Eligibility: Applicants must meet the requirements for admission to the School of Medicine. While no specific undergraduate coursework is required beyond that established by the School of Medicine, individuals should have extensive preparation in their field of interest. The GRE is not accepted. Competitive applicants will have spent the equivalent of four or more semesters in laboratory research. Although most individuals enter the program at the beginning of their medical studies, medical students in the first or second year at Washington University are encouraged to apply. Student performance is reviewed annually, and high scholastic achievement is expected.

Application: Students must complete the AMCAS and the Washington University School of Medicine secondary application. Direct inquiries to:

Brian Sullivan
Executive Director of MSTP
Washington University School of Medicine
CB 8226
660 S. Euclid Ave.
St. Louis, MO 63110

Research Electives for Credit in Fourth Year for Medical Students

Number of Participants: Available to all fourth-year medical students.

Length of Program: 6 to 12 weeks

Funding: No remuneration is allowed for electives that are taken for academic credit. Payment or acceptance of a scholarship or stipend outside of a financial aid award for an elective for academic credit is prohibited.

Overview: To qualify for the doctor of medicine at Washington University School of Medicine, students are required to satisfactorily complete a minimum of 36 weeks of clinical or research electives in the fourth (final) year. Research electives must: a) be sponsored by a designated investigator who will outline the project, oversee the student's progress, and evaluate the student's performance; b) be accomplished while the student is enrolled at Washington University School of Medicine; and c) be a project in which the student has worked full-time for a total of at least six weeks. Research electives are on a full-time, daily basis. There is no thesis requirement. Research electives are graded credit/no credit.

Application: Students desiring research work should arrange this with the appropriate faculty member and must file a Research Elective Proposal Form with the Associate Dean for Medical Student Research at least six weeks before the research is to begin. For questions relating to scheduling of fourth-year plans, contact:

Melanie Smigielski
Manager, Electives Office
Voice: (314) 747-3854
Email: melanie_smigielski@wustl.edu
Website: <https://md.wustl.edu/academics/curriculum/electives-fourth-year>

Washington University encourages and gives full consideration to all applicants for admission, financial aid and employment. The university does not discriminate in access to, or treatment or employment in, its programs and activities on the basis of race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information. Inquiries about compliance should be addressed to the university's Vice Chancellor for Human Resources, Washington University, Campus Box 1184, One Brookings Drive, St. Louis, MO 63130. The School of Medicine is committed to recruiting, enrolling and educating a diverse student body.
